EBIX ADVANTAGE WEB

EbixAdvantage Web

These days finding success within the Property and Casualty market is extremely tough. Heavy competition and waning interest in long term policy investments have left most insurers with a strategy to simply survive and wait for a solution to present itself.

To adapt, P&C insurers are becoming more innovative, but they need the right tools to bring their vision to life. These tools need to help them to grow their client pool, spread their business into markets their competition can't touch, and expand their brand successfully.

Create Success

With EbixAdvantage Web, insurers cannot only survive the soft market, they can thrive in it. EbixAdvantage Web empowers carriers with the flexibility to build the products and lines other systems simply can't handle. Create policies that not only satisfy your client's needs, but also solves their problems in ways your competitors cannot. Commercial lines, personal lines, niche offerings, specialty coverages; if a line of business can be written for it, it can be managed through EbixAdvantage Web.

EbixAdvantage Web is your tool, your system. With its dexterous, customizable and configurable user interface, the tools you need go where you want them.

Pair this with the benefit that comes from having a secure access hierarchy built specifically around your company's internal structure. The result is a system that puts you in the driver's seat. You choose who gains access to sensitive information, what product lines you want to cover, and the format and functionality of your processes.

The Data Driven World

Portals, exchanges, policy admin systems, agency management systems—the insurance industry is becoming more connected and more automated every day. Carriers need solutions that can work with native systems, third party programs, and regulatory agencies, all around the world. EbixAdvantage Web works with other Ebix systems, such as EbixASP (our AMS), TEAM-UP (our Carrier/Agency bridging solutions), and our SmartOffice CRM system, and it works with nearly all other software systems in the P&C space.

With Insurance software becoming more integrated every day, Carriers need solutions that can work with native systems, third party programs, and regulatory agencies, all around the world.

EbixAdvantage Web can be customized to not only accept data from other systems, but to work with the functionality of other systems. Data can be processed and moved from function to function and can be set in a hierarchy of importance through the specifically designed functionality you need. Even if the data comes from a source outside of the standard insurance software solutions pool, EbixAdvantage Web's functionality can be tailored to accept, parse, and employ it.

CHOOSE A PARTNER, NOT A VENDOR

At Ebix, we define our relationships with Property and Casualty professionals as partnerships, not as clients or customers. Our dedicated service and support staff are focused on helping your business grow.

Through having pains soothed, problems solved, processes customized, data migrated, staff trained, and clients won, Ebix is there every step of the way. From the moment you decide EbixAdvantage Web is the perfect solution for your needs throughout your entire migration and onboarding process and beyond.

To find out how Ebix can help you achieve success, contact us at the address below. We look forward to being your total insurance software solution.
